

Tip Guide Contact Tips for AdvErL EVO

The following symbols and expressions indicate the degree of danger and harm that could result from ignoring the corresponding instructions:

This alerts the user of the possibility of minor or moderate injury or damage to the device.

This informs the user of important points concerning operation or the risk of device damage.

Trademarks and Registered Trademarks

Parts of the names of companies, products, services, etc. used in this manual may contain either trademarks or registered trademarks owned by each company.

 Tapered Short
 - FL Flat Long

Relation between Fiber Core Diameter and Laser Beam Characteristics

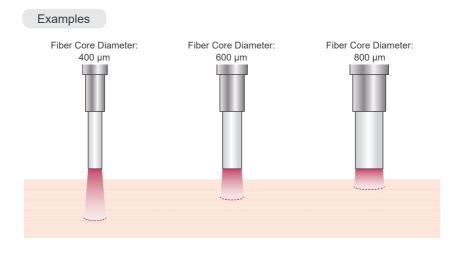

A laser beam is a single wavelength light beam that travels in one direction, and its irradiation pattern can be changed by the fiber end shape of the contact tip. For that reason, as the distance from the end of the contact tip increases, the amount of energy per unit area decreases.

The energy density (J/cm²) is inversely proportional to the fiber core diameter. A smaller fiber core diameter has a higher energy density, and a thicker fiber core dis-

perses energy.

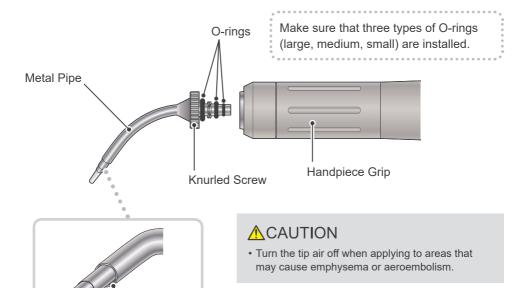

This means using a thin fiber core diameter contact tip can vaporize narrow and deep areas, and using a thick fiber core diameter can vaporize wide and shallow areas.

Setup

Parts Identification

Contact Tip

Handpiece Grip

Tip Air Hole

Spray Water Hole

R Handpiece Grip

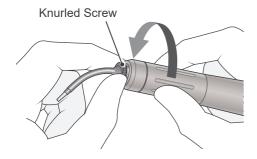

(Only for contact tips R200T and R300T.)

Do not excessively press the contact tip against the tooth as it may result in damage to the end of the

contact tip or dislocate the metal pipe.

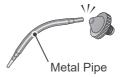

Contact Tip Attachment

Holding the knurled screw of the contact tip, rotate the handpiece grip to screw the contact tip all the way in.

• Never hold the metal pipe; this could damage the contact tip.

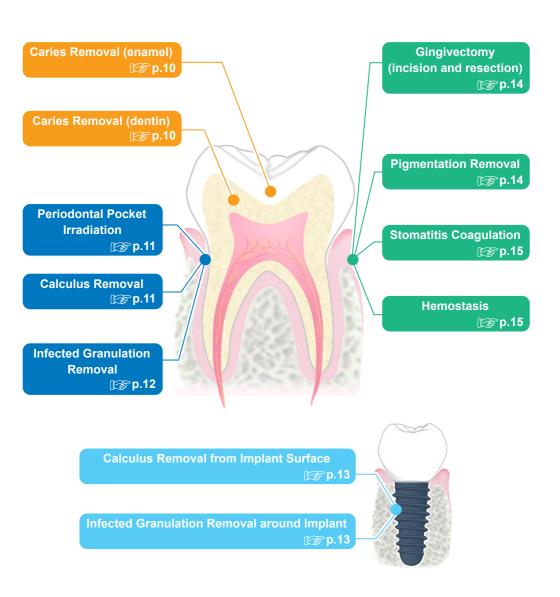

ACAUTION

- Always attach the contact tip while the AdvErL EVO is in "Stand-by" mode or the key switch on the AdvErL EVO is in the "OFF" position.
- Do not emit a laser when the end of the contact tip is dirty; this may result in overheating the contact tip. This is extremely dangerous, especially when turning off the spray water and tip air, as the contact tip generates heat even if there is only a little dirt on it.
- Contact tips are consumable parts. Be sure to perform a pre-use inspection and make sure to replace it with a new one when you find any of the following conditions. Otherwise, the use of worn out contact tips may result in overheating and may burn the patient.
 - · If the end of the contact tip is chipped or worn out
 - · If the output seems lower than normal
 - If the guide light is dim or does not appear at all
 - If the guide light pattern is different from when it was new
- 1 Do not process (polish, cut, etc.) the end of the contact tip; this may damage the contact tip.

Operation

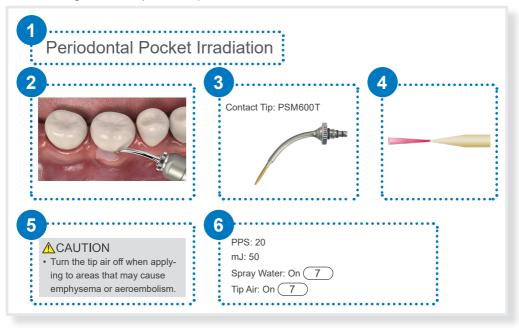

Applicable Treatments

Treatment Guideline

How to Use the Treatment Guideline

The following is an example and explanation.

- Treatment name
- 2 Treatment image
- 3 Recommended contact tip (reference information)
 The most suitable contact tip for this treatment among the accessories is listed. For other recommended contact tips, see p.16 "List of Recommended Contact Tips for Each Treatment"
 You can select a contact tip as the occasion demands.
- 4 Laser beam irradiation pattern
- 5 Precautions
- 6 Recommended settings (reference information)
 Adjust the energy level setting as necessary.

Treatment Guideline

Hard Tissue

Effectiveness: Vaporization

Caries Removal (enamel)

Contact Tip: CS 600 F

Tip Lineup

Tip Lineup

C (Caries)

C400F

Feature: Small fiber core diameter and high energy density. Suitable for hard tissues such as enamel.

Code No.: 8001909

C600F

15.0 Approx. 50°

Feature: Standard tip of the C series.

Suitable for hard tissue treatment, pigmentation removal for soft tissue, stomatitis coagulation, as well as hemostasis.

Code No.: 8001906

C800F

Feature: Wide fiber core diameter and low energy density.

Use for wide and shallow vaporization.

Suitable for pigmentation removal, stomatitis coagulation, as well as hemostasis

CS (Caries Spray)

CS600F

Feature: Spray water has a fine, misty quality so that water is delivered uniformly. Vaporization efficiency is higher than C 600 F.

Tip Lineup

Tip Lineup

PS (Perio Surgery)

PS400T

Feature: Small fiber core diameter.

Suitable for narrow periodontal pocket treatment.

Code No.: 8001917

PS400TS

Feature: The fiber length is shorter than PS 400 T.
Suitable for narrow periodontal pocket treatment.

Code No.: 8001901

PS600T

Feature: Standard tip for the PS series.
Suitable for entire periodontal tissue treatment.

PS600TS

Code No.: 8001902

PSM (Perio Surgery Metal)

PSM600T

Feature: Includes a metal sleeve on the tip of the fiber to increase durability against tip breakage.

Suitable for periodontal tissue treatment.

Maximum Energy: 80 mJ Code No.: 8001920

- Do not exceed the maximum energy limit when using PSM600T.
- 1 Do not apply excessive force to the tip of the fiber. This could damage the fiber or metal sleeve.

S (Surgery)

S600T

Feature: Dedicated for incision and resection of soft tissue.

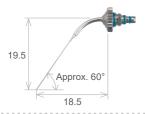

Tip Lineup

Tip Lineup

R (Root)

R200T

Feature: Approximately 80 % of the laser beam will be diffused at 360° toward the side and rear.

Suitable for treating thin areas.

 * Always attach R200T to the R handpiece grip.

Maximum Energy: 30 mJ Code No.: 8001915

Do not exceed the maximum energy limit when using R200T.

R300T

Feature: Approximately 80 % of the laser beam will be diffused at 360 ° toward the side and rear.

Suitable for treating thin areas.

* Always attach R 200 T to the R handpiece grip.

Maximum Energy: 30 mJ Code No.: 8001914

Do not exceed the maximum energy limit when using R200T

R600T

Feature: Approximately 80% of the laser beam will be diffused at 360° toward the side and rear.

Suitable for treatment around implants and periodontal tissue.

P (Perio

P400T

Feature: The laser beam is initially focused 0.5 mm ahead of the end of the fiber core, then it diffuses.

Suitable for narrow periodontal pocket treatment.

Code No.: 8001911

P400FL

Feature: The fiber length is longer than C400 F.
Suitable for treatment in narrow and deep areas.

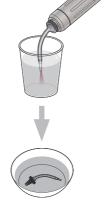

Reprocessing

Contact Tips

Be sure to perform the reprocessing procedures in the following order after use with each patient. (Refer to the accompanying Instructions for Use for the AdvErL EVO.)

Pre-treatment

Enzymatic Detergent

Immerse the fiber area of the contact tip in a container filled with tap water or deionized water, and then emit the laser for approximately 3 to 5 seconds. If there is a lot of debris, emit the laser for 20 to 30 seconds.

Recommended Settings ———	
PPS: 25	
mJ: 50	
Spray Water: On 7	
Tip Air: On 10	

Use enzymatic detergent to clean blood and debris left on the tip of the fiber.

Cleaning & Disinfection

Disinfectants Approved by J. MORITA MFG. CORP.

Country: U.S.A.

- Ethanol (70 vol% to 80 vol%)
- Chlorhexideine Gluconate

Country: Other than U.S.A.

- FD333 forte
- Ethanol (70 vol% to 80 vol%)
- Chlorhexideine Gluconate

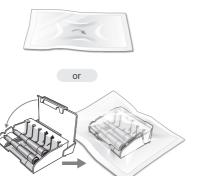

Clean the contact tip thoroughly with tap water, then use a soft cloth to wipe off any moisture.

1 Do not clean the contact tip with an ultra sonic cleaning device. This could damage the contact tip.

Disinfect the contact tip with disinfectants approved by J. MORITA MFG. CORP.

- Do not use disinfectants other than those designated by J. MORITA MFG. CORP.
- Do not use a washer-disinfector.

Packaging

Place the contact tips individually in a sterilization pouch, or store the contact tips in the tip stand and place it in a sterilization pouch.

- Use sterilization pouches that conform to ISO 11607.
- ! The end of the contact tip is fragile and easily chipped; handle with care. When using the tip stand, place the end of the contact tip facing down.

4

Sterilization

Recommended Autoclave Settings

Country: U.S.A.

Sterilizer Type	Temperature	Time
Gravity	+135°C (+275°F)	10 to 15 min

Country: Other than U.S.A.

Sterilizer Type	Temperature	Time
Dynamic Air Removal	+134°C (+273.2°F)	5 min
Gravity	+135°C (+275°F)	5 min

Autoclave the autoclavable parts.

- Be sure to complete the clean and disinfection steps before autoclaving the parts.
- 1 The setting temperature for sterilization and drying process must be +135°C (+275°F) or lower. If the temperature is set beyond +135°C (+275°F), it may cause damage to or stain the parts.
- Do not sterilize the parts by any method other than autoclaving.
