

Root ZX mini

Compact and Accurate

The trusted name in apex location for over 30 years

The Root ZX mini shares the same proven technology that has been relied on by endodontic enthusiasts for over 30 years. This technology has been independently evaluated at a 97.5% accuracy rate.*

Accurate

Utilizing a unique and proven Morita ratio technique, the Root ZX mini provides a highly accurate indication of the file's location. The accuracy of the apex location is not affected by the presence or absence of fluids in the canal.

Simple

No calibration or zero adjustment needed. Automatically adjusts to changes in temperature, moisture, etc. inside the canal, even during treatment.

Compact

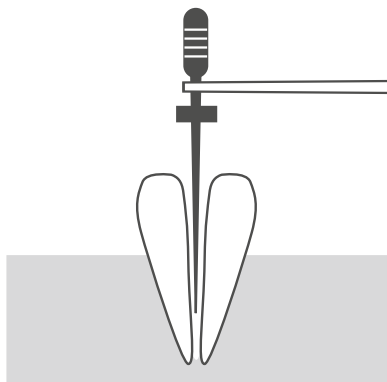

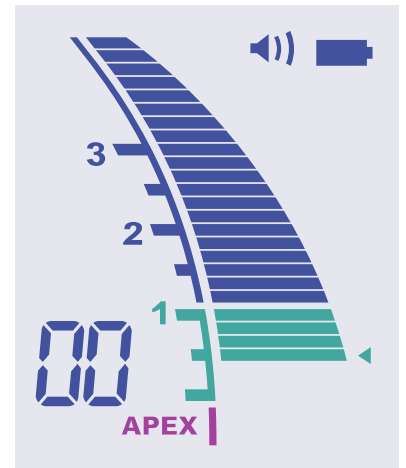

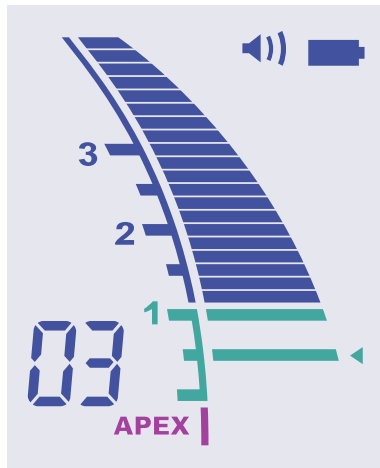

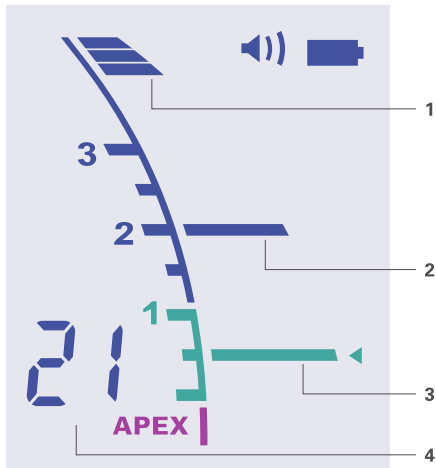

Whether placed on a tray, a table, or elsewhere, the Root ZX mini's compact size allows for easy and convenient usage.

Modular

Connect your Root ZX mini to your Tri Auto mini to provide a complete endodontic treatment solution.

*Independent study. Data on file.

Simple and Effortless

The meter is activated when the file is inserted into a root canal. The number of bars remaining before reaching the preset is shown in the information display.

When the file tip reaches a position near the apex, the bar color changes to green indicating a critical area.

When the file tip reaches the preset position, the flash bar stops blinking and stays on.

Further advancement, the "APEX" and "◀" indicators will start to blink.

1 - File position indicator bar

2 - Memory bar

Easily mark the beginning of a sharp curve or some certain distance from the apex. Can be used as a guide in order to maintain a consistent working length.

3 - Flash bar

The reference point for determining the canal or enlargement. Set anywhere between 2 and APEX.

4 - Information display

Number of bars left before flash bar is reached during apex location. Otherwise, indicates memory number for flash bar.

0.5 Meter reading

The meter's 0.5 reading indicates that the file tip is located very near the physiological apical foramen. Use this to determine the working length depending on the individual case. The exact working length depends on the shape and condition of the canal, and a clinical judgement must be made by the dentist.

Accessories

Specifications

(Unit: mm)

Name: Root ZX mini
Model: RCM-7
Rating: DC 4.5 V
Power Consumption: 0.2 W
Weight: Approx. 110 g
Battery: 1.5 VDC AAA x 3 (included)

Development and Manufacturing
